

## Frequently Asked Questions

### **When was AG Mednet founded?**

2005

### **Where is AG Mednet headquartered?**

AG Mednet is headquartered in Boston and serves the global medical and clinical trial communities.

### **Who founded AG Mednet?**

AG Mednet was founded by executives from the healthcare and telecommunications industries. The team has applied proven telecom principles along with patent pending technologies to deliver a multi-fold increase in imaging delivery performance and ease of use, while providing access and exchange capabilities between sites, regardless of the type of modality, PACS or DICOM reader.

### **Who is on the company's senior management team?**

Abraham Gutman, President and CEO  
Mike Goldner, Vice President, Technology & Networks  
Brian Zabin, Vice President, Business Development

### **Who is on the AG Mednet Board of Directors?**

Abraham Gutman, President & CEO  
Ben Gomez, Managing Director, Pilot House Associates  
Dr. Barbara McNeil, M.D., Ph.D. Chairwoman, Department of Healthcare Policy, Harvard Medical School

### **Who are AG Mednet's investors?**

AG Mednet is a privately-held company. The company has secured funding from key individual investors who wish to remain anonymous.

### **What is AG Mednet? What does AG Mednet do?**

AG Mednet ([www.agmednet.com](http://www.agmednet.com)) is the world's largest HIPAA and 21 CFR Part 11 compliant diagnostic imaging exchange network. The AG Mednet network routes DICOM-based diagnostic image studies ranging from standard modalities, like CT, MRI, ultrasound, PET and digital x-ray, to the most advanced studies, such as IVUS and CTA/MRA yielding hundreds of gigabytes. With its powerful routing and traffic grooming capabilities, AG Mednet subscribers—Pharmaceutical, Biotech and Medical Device companies, Core labs, and Clinical Research Organizations utilizing imaging technology as part of their trial protocol—perform the most demanding tasks, all without manual intervention, IT administration or capital investment.

### **Who does AG Mednet serve?**

AG Mednet serves Hospitals, Teleradiology companies and Imaging Centers, as well as Pharmaceutical, Biotech and Medical Device companies, Core Labs, and Clinical Research Organizations utilizing imaging technology as part of their trial protocol.

In the clinical environment, the AG Mednet network enables studies to be seamlessly transferred from remote locations to a central repository. There, the studies can be accessed by interpreting physicians directly from the local PACS through thin clients,

or simultaneously delivered to full featured workstations at remote reading rooms, an interpreter's home or a third party on the network.

In the device and drug development context, AG Mednet provides an easy to use mechanism enabling sites worldwide to transfer cases and associated transmittal forms directly from modalities, PACS or even a trial manager's computer directly to the trial's central repository. From the core lab and CRO perspective, cases can be delivered directly to the trial's specific QA environment or work repository, enabling immediate access, and providing auditable logs and reports for conformance and quality measures.

**Tell us more about the AG Mednet network.**

AG Mednet is an extensive HIPAA and 21 CFR Part 11 compliant network designed to route DICOM-based diagnostic image studies ranging from standard modalities like CT, MRI, ultrasound, PET and digital x-ray to the most advanced studies such as IVUS and CTA/MRA yielding hundreds of gigabytes.

With its powerful routing and traffic grooming capabilities, AG Mednet subscribers utilizing imaging technology perform the most demanding tasks, all without manual intervention, IT administration or capital investment. With a record 99.9999% uptime, it meets the most stringent requirements demanded by emergency radiology applications, as well as in-vivo enrollment verification for clinical trials.

As a carrier-class fiber-optic network, AG Mednet is monitored 24x7x365. It can easily be deployed in less than two hours.

**Who uses AG Mednet's diagnostic imaging exchange network?**

Prominent teleradiology and clinical trial settings of all sizes, worldwide, have adopted the AG Mednet network to ensure improved delivery of flawless images.

**How can I learn more? Contact the company?**
